The Bayvelgere...

A BICYCLE
WITHOUT A CHAIN

CERTIFICATE OF AWARD BY THE
AMERICAN INSTITUTE IN
OCTOBER, 1896

“It presents some unique mechanical features in overcoming the difficulties inherent in the construction and propulsion of this class of bicycles. We therefore consider it worthy of the special medal of silver.”

THE BAYVELGERE CYCLE CO.

No. 1 Union Square New York City

SALESROOMS

No. 25 Warren Street, New York City

No. 504 Broad Street, Newark, N. J.

The Honor Badge for 1897 is the most beautiful and most expensive decoration or souvenir ever given by the L. A. W. as a reward for loyal work. Every member of our State Division should have one. Full particulars in printed circular will be sent you on receipt of your postal card request. These badges are of solid sterling silver with heavily gold-plated medallion at center. The richly colored facing enamels of green and white combine with gold and silver to produce a strikingly beautiful appearance. The badge may be worn in a variety of ways; as a watch-fob, pin, breast decoration, charm, etc., etc. Just show this new Road Book to your cycling friends who are not members and send their application direct to me *with the request that they be credited to you on the Honor Badge account* (don't forget this). When you have sent five (or two if you live in a village of less than 5,000 people). You will receive the beautiful steel engraved (13½ x 17 inches) *Honor Certificate*. When you have sent ten more you will receive the honor medal. In future years it will be to you a cherished souvenir.

W. S. BULL, Secretary-Treasurer
Vanderbilt Building
New York, N. Y.

... THE FARGO ...

“Ball-Bearing”

Members of the L. A. W.
will please ask their local
dealers to show them the

“Ball-Bearing” Shoe

These Shoes are made on
graceful, roomy lasts, and they
touch and support the foot
at every point while under
pressure.

Black, Tan and Wine,

\$2.50 to \$4.00.

None genuine
without this
Trade Mark
on every shoe.

“Best-Bike-Shoes”

Ask your Dealer for them. If he does not keep
them send to us for list of dealers who do.

Please Read Carefully

To the Members of the New York Division:

We hope and intend to make these road-books the very best of all road-books, and have exerted our zeal and labor to make this first edition at least acceptable. The Editor realizes that it contains many imperfections, but it is put forth as a promising experiment to prove the value of this form of tour book, and to form a basis for subsequent work in which the errors and short-comings of the present edition may be avoided. The book has been compiled entirely from voluntary contributions from League members, many of whom reside at a considerable distance from portions of the routes covered by them, and the details of the mapping have been worked up from a mass of other data, the separate parts of which seem to contradict each other in some particulars.

We earnestly request that members will freely criticise this work in all its details, and inform the chairman, clearly and at length, of the errors and omissions which come to their notice, so that at the close of the riding season the committee may take up the work of revision with data that will make next year's road book a model in every respect.

We also request that all members having knowledge of good routes not included in this book (located within the territory covered by the index maps) will send accurate data of distances and description so that such routes may be included in future editions.

The present committee claims no credit for devising the method of mapping routes, it having been inaugurated by the Road Book Committee of 1896. The committee is indebted for much information to the following named gentlemen: COL. E. P. NORTH, Department of Public Works, New York City; N. P. LEWIS and GEO. W. TILLSON, Department of City Works, Brooklyn; HENRY P. MORRISON, County Engineer, Richmond County; T. HARRY HOLMES, F. ADEE HULST, FRANK P. SHARE and to the contributors whose names appear at the head of the map plates.

WALTER M. MESEROLE,

Editor and Chairman.

ROAD BOOK COMMITTEE OF 1897.

INDEX TO PLACES.

IMPORTANT NOTE.—The places named in this index are only those shown on *route* maps. Many other places are named on the *index* maps in order to show their location as related to the several routes. These routes will be increased and extended in future editions as fast as contributed by members who are interested in the progress of the work.

FRAUDULENT "L. A. W. HOTELS."—It has come to be the practice for proprietors of various third-class hotels and road house grogeries, and occasionally for more pretentious hosts, to display, without authority, signs bearing the "L. A. W." initials or insignia. I am informed also that certain hotel proprietors holding official certificate of appointment are ignoring their contract requirements, and refuse to give L. A. W. members a lower rate than is charged to non-members. These proprietors of L. A. W. hotels have received large advertising from the L. A. W. and have agreed in writing to give L. A. W. members from 10 to 30 per cent. lower rates than are charged to other wheelmen. They further agree to forfeit \$50 to our division for every violation of this contract. These two offenders, the fraud proprietor and the forgetful proprietor, are the men we are after. Please report them as fast as discovered to

ISAAC B. POTTER, Chief Consul,
Vanderbilt Building, New York, N. Y.

ROUTES WANTED.

OUR road book committee is still at work, making new maps, adding new routes, correcting, revising and in a patient, painstaking way, doing everything possible to make these road-books the very best on earth. They are a committee of voluntary workers who at odd times have some trifles of personal business to attend to and so it may not be always possible for them to answer grumbling letters which come to them from L. A. W. members in lieu of salary. What they want is the help of every intelligent rider who will carefully prepare and contribute a new, pleasant or popular route, or who can send printed detail maps (drawn on large scale) showing the roads and streets in any of the towns within the territory covered by the index maps. Don't tell the chairman that this book is wrong and that you could have made a better one with your eyes shut. All this he knows, and you are just the man he's been looking for. Write him a friendly, encouraging letter, praising the good points of his faithful work, and send him carefully prepared sketch of at least one excellent route with notes of distances between all prominent points, crossroads and turns, and see to it that these distances are accurately slated from cyclometer measurements.

In no way can you spend a more pleasant and satisfactory day than by taking a stroll on your wheel in quest of new matter for the next edition. If you contribute a new and acceptable route it will bear your name on the printed map page when it appears. If the new route contains features which are specially famous or beautiful, or of historical note, write a description of these features, as tersely and gracefully as you can and send them to the chairman with your map sketch. In making a sketch map of the route *don't confuse your notes by attempting to get too much on one sheet*. Better use a dozen pages for a ten mile route if necessary, and have them all clear. It will be easier to make and vastly easier to understand. Finally, don't attempt to cover a route that has already been sent to the committee. If you have a good route in mind write a line to Mr. Meserole and ask him whether it is included among his notes. THAT is the sort of letter he delights to receive and will promptly answer.

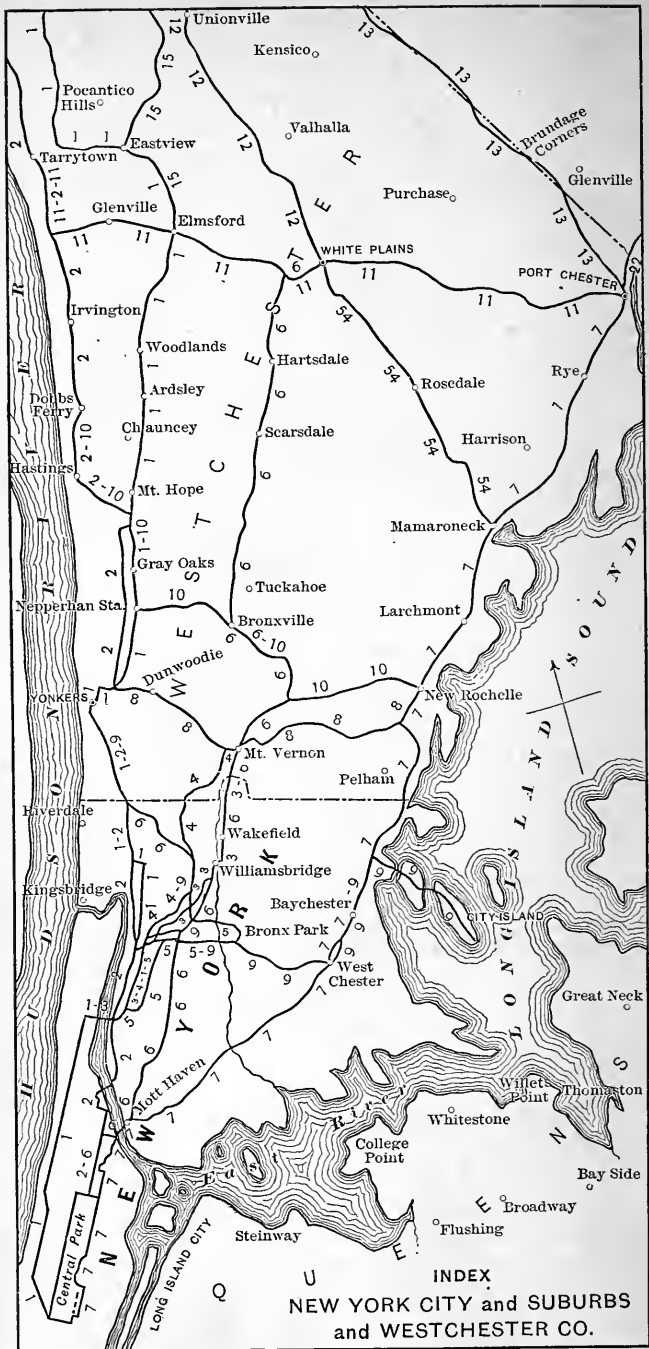

Fraternally,

ISAAC B. POTTER,

Chief Consul.

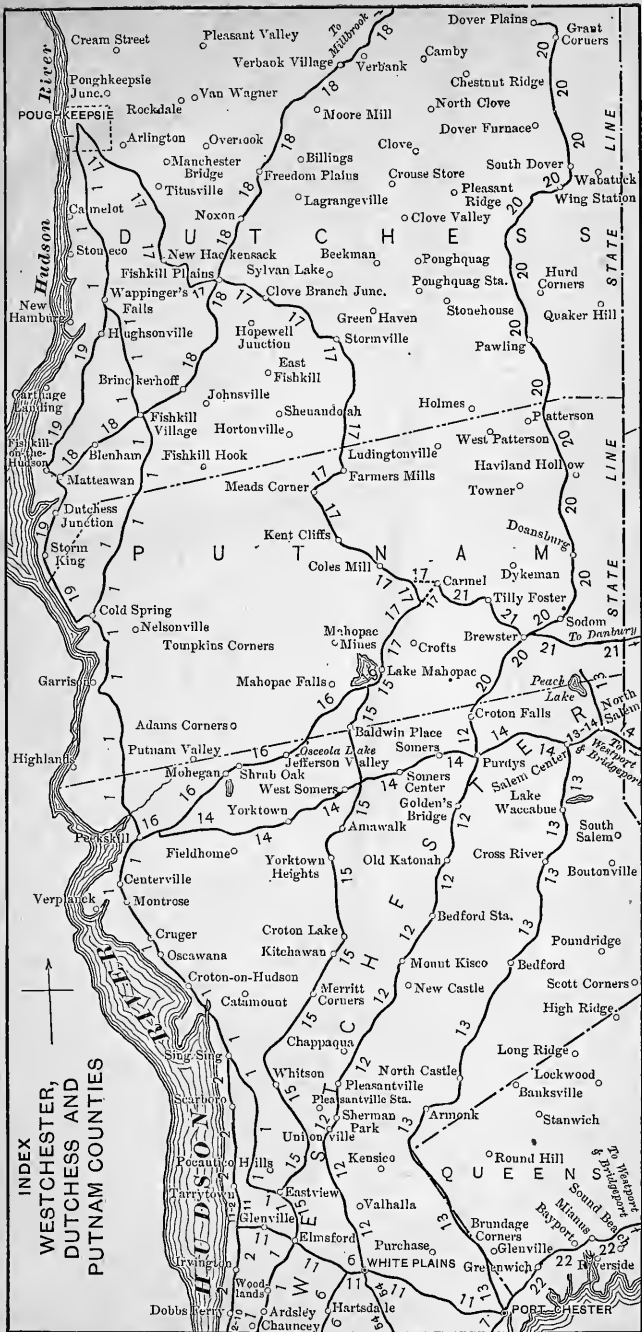

ELECTION DAY IS COMING.

IF you wish to know how the Senator and Members of Assembly who represent your district stand on the Good Roads Question, write a postal card inquiry to the Chief Consul. Get the wheelmen voters together in your town and let the "statesmen" know you are alive on election day. We may catch larks if ever the heavens fall but we'll never have good roads till we elect men to office who are broad and brainy enough to know that a good road is a good thing for everybody.

"The Pines," (Fulton Street, corner St. Paul's Road), Hempstead, L. I.

"L. A. W." OFFICIAL HOUSE.

A select, strictly temperance house, which caters to ladies and gentlemen only. All refreshments are of the best quality. "The Pines" affords ladies the quiet of a refined home, and is entirely free from the annoyances accompanying a "Road House."

A HOME IN HEALTHY, ARISTOCRATIC HEMPSTEAD.

\$500.00 cash, balance monthly, buys a fine, new residence, (built by days' work), on large plot, in cream Hempstead Village, near two stations, and Garden City Schools, houses have open, sanitary, nickel-plated plumbing, enamelled iron bath, cabinet oak trim, open fire-places, tiled hearths, etc. Frequent city trains, from 5.30 A.M. until midnight, also rapid transit, commutation, 10 cents. Hempstead has public water (pronounced "absolutely pure," by Prof. Chandler, of New York), is lighted by large electric lights, and just outside Greater New York.

Address F. W. CRANDELL, (Owner), Hempstead, L. I.

CONSULS, HOTELS AND REPAIR SHOPS.

Important Note.—Every League member is requested to notify the Chief Consul of every violation of official contract by a League hotel proprietor which may come to his notice. Each of these proprietors has made a sealed contract with our State Division, in which he agrees to keep a clean and hospitable house and to supply good meals. He further agrees and represents that the rates mentioned in connection with his hotel in the following list are his regular rates to transient guests and that he will allow a discount or rebate (to League members *only*, and only to League members *on presentation of unexpired membership ticket*), amounting to a certain percentage named in contract. These percentages of discount are mentioned in the following alphabetical list. These hotels have been widely advertised by the L. A. W., and League members are *exclusively* entitled to the benefit of these discounts. Each hotel proprietor agrees to forfeit the sum of \$50 in case he allows similar discounts to wheelmen who are not members of the L. A. W., in or case he violates his contract in any other substantial particular. The Chief Consul would be pleased to receive the fullest particulars of any case where the proprietor fails to discriminate in favor of L. A. W. members or violates his contract in any other respect.

In the following alphabetical list the following abbreviations are used: C, Consul; H, Hotel; R, Repair Shop.

Appointment of Consuls, hotels and repair shops will be further extended wherever the League may be benefitted by further appointments.

The figures annexed to the title of each hotel refer to the prices upon which discount is computed. The first sum given is the regular charge per day, next the ordinary charge for breakfast, then the dinner charge, then the supper charge, then the ordinary price charged for lodging, and then the percentage of discount from these prices to which League members will be entitled on presenting their membership tickets. For example, if you read "The Pines, \$2.00, .50, .50, .50, .50, 20%" you will understand that the hotel called "The Pines" makes a customary charge of \$2.00 per day and a charge of 50 cents each for breakfast, dinner, supper and lodging, and that in settling your bill at that hotel you will be entitled to 20% discount from those prices.

AMAGANSETT.—(C) George E. Jones; (H) The Pines, \$2.00, .50, .50, .50, .50, 20%; (R) Thomas H. Bennett. AMENIA.—(C) J. Stuart Chaffee; (H) Amenia House, \$2.50, .50, 75, .50, .75, 10%. TOURING.

By A. B. BARKMAN.

There is little doubt that by far the largest number of active cyclers find their pleasure in touring. The pottering cycler, who never ventures far from home, has no idea of the enjoyments to be found in country rambles on the wheel. The touring field is practically open to any rider who has time to devote to it, and the number of cyclers who thus spend their summer holiday is yearly increasing. These holiday tourists, guided by past experience, or by the advice of their more practical fellows, plan their trips with an eye to personal comfort, and after a few days of enjoyable riding, return home invigorated and instructed.

The first step a prospective tourist should take, after he has acquired a sufficient knowledge of his wheel and confidence in himself, is to join the League of American Wheelmen, an association formed to promote the interests of cyclers in general and tourists in particular. The initiation fee is one dollar, and the annual dues a like amount (payable in advance) and the writer, having filled up the necessary application blank, will have to wait a longer or shorter time for his ticket, usually about three weeks.

Selecting Route.—This matter having been duly arranged, the next thing is to plan the tour and select the route, which can best be done with the aid of the various road books and maps issued by the State Divisions or recommended by the Touring Department.

Each Day's Journey.—It then becomes necessary to decide as to the average day's journey, and on this point it is necessary to utter a very emphatic warning against the error into which so many tourists fall, of fixing a ridiculously high standard which they find it practically impossible to carry out. A large number of beginners fancy they can ride with ease from sixty to one hundred miles daily for a week or so at a stretch, and on this basis plan their tours, with the result that they either break down utterly and are compelled to take the train home, or else they spend a miserable "holiday," riding hard against time during the whole trip, thus converting what should have been a pleasant outing into a period of incessant hard labor and discomfort.

The experienced tourist, on the other hand, rather shortens the day's journey, being satisfied with from forty to fifty miles, and generally allows a spare day in the middle of the week, in case of delay by rain or other causes, or a desire to take in some pleasant side trip or object of interest, thus letting himself off as easily as possible with a view to the more complete enjoyment of the tour as a whole.

For a beginner even shorter distances are advisable at first; for a man who can ride his sixty or seventy miles right off, will find forty miles a day for a week quite a different matter, and considerable of a task until he has learned by experience how to economize and save his physical powers.

Companions.—Except in the cases of some peculiarly constituted individuals, a solitary trip is a very slow performance, and the presence of at least one companion brightens things up materially; yet, the rider had better go alone than journey with a disagreeable companion, or one very much slower than himself. Two fairly equal riders greatly assist each other in

maintaining a good rate of progression, as when one lags the other brings him along, and when this man tires the other has perhaps recovered his pace. Large parties are scarcely so satisfactory, especially if club rules are rigidly enforced, as this course means that the whole party shall proceed at the pace of the slowest rider, which soon becomes very irksome to the faster men of the party, causing grumbling and discontent. Under such circumstances, loose riding should always be permitted, and, if possible, the slower men should be started somewhat earlier than their more speedy companions. Again, in large parties, in order to be sure of good accommodations, it is necessary that arrangements be made ahead for meals and lodging. This entails a considerable amount of care and labor upon the promotor or manager of the tour, and renders each day's journey inflexible, which oftentimes results in considerable discomfort to the entire party, as circumstances frequently arise which make delays advisable or render progress inconvenient. My personal experience has been that two are a good number, four are better, and six the maximum for comfort and enjoyment.

Preliminary Training.—The intending tourist should not start out without some sort of training and preparation for the work before him, as this course often produces most unfortunate results. The mere task of sitting in the saddle for several hours daily, is painful to one who has not taken the precaution of undergoing previous practice and seasoning, and for this reason, if for no other, it is advisable that for some time before the day of departure a regular course of riding should be followed, at least three times weekly, and this riding should occupy an hour or more, and should include a little practice at hill work as well as some sharp dashes along the level. Nothing like high training is required, but something more than the easy dawdling which so many riders are fond of indulging in is necessary. It is a good plan to fix upon a stated route, say twelve or fifteen miles, and to ride over it three or four times a week, the trip being carefully timed, and the rider trying to do better on each occasion. This will seem to many somewhat of a task, but it will vastly develop the muscles, improve the wind, and increase the rider's powers for average work. If this course be carefully followed out for a fortnight or three weeks before the tour, it will not only increase the rider's capabilities, but as a natural result add decidedly to his personal comfort. It is scarcely necessary to remark that when touring the highest possible pace should not be attempted, but a fair, steady and regular pace adhered to throughout; and this steady and regular pace will be easier to maintain if the rider has learned the knack of going a great deal faster. This is the theory of training, and it applies to the tourist as well as to the racing man.

Luggage.—The rider having developed his powers by careful practice, it will next be for him to consider what are the necessities to be carried for his comfort, or sent to various places where he may stop en route, and here again great latitude must be allowed, as tastes differ most notably, one rider regarding a tooth-brush and a piece of soap ample equipment for a week's journey, while another will be loaded down with packages and needless impediments, which contain necessities from his standpoint. The rider of a bicycle will learn with experience how to carry sufficient for comfort, which is a happy medium consisting of not too much, nor yet too little, but just enough for all reasonable requirements; and such an equipment can readily be carried on a bicycle, and renders the tourist independent of the troubles and annoyances

are light, neat and comfortable. Contains air enough to support the body in the water without an effort, **thus enabling the wearer to become an expert swimmer.** Should always be carried by those travelling on the water, as they are absolute life preservers. We make **Ladies' Bathing Corsets**, also **Children's Corsets and Vests**, which, when worn, prevent all danger of drowning. Stamp for Catalogue.

Pneumatic Vest and Corset Co.

No. 8 West 14th St., New York City

My desire to render a substantial favor to the wheelmen of America, impels me to say a good word for SALVA-CEA. For that lameness of muscles which comes to the moderate rider whenever he attempts a long day's run, I have found nothing to be compared with it, while for sprains and bruises its curative and soothing effects are really magical. I heartily recommend it.

always incident to the sending of clothing by express, owing to frequent mistakes, delays or miscarriage, most vexatious drawbacks which every tourist has experienced.

Some cyclists fly light in the matter of luggage, trusting to chance for such changes as may be necessary, while they have always the option of going to bed if unable to obtain dry garments in which to sit up. But the prudent rider, or one who has once suffered from the inconvenience and discomfort of being without, will take care to provide himself with at least one complete change of undergarments; one of the best and most convenient forms of which will be found in the full jersey suits, of not too thin texture, sold by all dealers in cycling and athletic goods.

A jersey suit will roll up into a very small compass, and when put on it completely clothes the body from neck to feet in dry woollen attire, which may be worn alone if necessary, and is, by all odds, when so worn, the most comfortable and serviceable riding suit—and over which damp outer garments may be put on again without danger from cold, if not without some little discomfort. It can also be used to sleep in at night, instead of using an ordinary night-shirt, always a bulky matter when space is limited, and the fact that woollen under-clothing is a protection, in case of damp sheets, is another argument recommending its adoption by the tourist. The kit is thus reduced by making one garment serve the place of two or more and at the same time the weight to be carried is lessened, an important factor to be considered in studying the convenience of the rider, for even the strongest and most sturdy of cyclers will do well not to overweight himself in this direction.

From my experience, the following is ample for a tour of two weeks, or even longer, and can be readily carried on a bicycle: 'The rider, when in the saddle, should wear a thin or medium weight merino undershirt, without sleeves; a pair of thin cotton socks, which not only keep the feet clean, but also prevent chafing and soreness; a complete jersey suit, consisting of a high-neck, long-sleeve jersey, and a pair of full tights; low shoes with stout soles, and a cap or other suitable head-gear, at the option of the wearer. For riding, the jersey suit has many advantages and no equal for comfort, being easy, giving full and unrestricted freedom to all the limbs and muscles, warm in cool weather, cool in hot weather, and drying very quickly if the wearer chances to be caught in the rain. I have seen fellow tourists on a warm summer day plunge into a cooling stream, jersey suit and all, and dry quickly after resuming the saddle. This practice is not to be recommended, for, while it may be extremely convenient and refreshing for the time being, it is conducive to colds and rheumatism. Stout soles to a tourist's shoes are essential to comfort when an occasional bit of walking is necessary, thin soles not only hurting the feet, but occasionally producing such soreness as will temporarily lame the wearer.

In addition to what the tourist has on when clothed as above, he should also carry the following outfit: Uniform of cycling coat and knee breeches, extra jersey suit, two pairs of socks, one undershirt, from three to six handkerchiefs, one neck handkerchief or scarf, comb, tooth-brush, razor, etc., if necessary, a small sponge, and a small chamois or soft leather bag with a stout drawing string, made like a tobacco pouch.

If preferred, the extra jersey suit may be omitted, and a flannel riding shirt and pair of long woollen stockings substituted, in which case attention is called to the new self-supporting stockings now generally sold by dealers, and which are

LONG ISLAND CITY

most comfortable, answering the purpose of drawers as well, and doing away with any garter encumbrances.

Having purchased two pieces of rubber cloth, of the quality known as dull finish rubber sheeting, each about one yard square, proceed to roll the things up tightly in two packages, each about twenty inches long and as small in circumference as it is possible to get them, placing the coat and breeches in one and the extra jersey suit and underclothing in the other, the other articles being conveniently divided between the two. Roll as tightly as possible—they cannot be too tight or snug—and wrap up securely, each in a piece of the rubber cloth, commencing at one corner, that the ends may be more firmly tucked in and made water-tight, and two sausage-shaped parcels is the result, which should be fastened with stout rubber bands or straps to prevent unrolling. The tourist, thus equipped, if overtaken by rain, may regard a wetting as a matter of no serious consequence, he being clad in woollen garments and his luggage protected by its rubber covering. But to proceed. One of these packages—and it should be that which contains the coat and pants—is attached in front of the handle-bar by means of a good luggage carrier, care being taken that the action of the brake is not interfered with. Arriving at the noonday resting place, if it is necessary or desirable to appear in full regalia, the coat and breeches are easily got at and slipped on over the jersey riding suit, the neck handkerchief—which should be in the same package—being neatly adjusted, the tourist is presentable to appear in any dining room. The other package, which should contain such things as will not be required until the day's journey is finished, is likewise attached to the handle-bar of the machine, just below the first package, by means of the luggage carrier.

The chamois bag before mentioned is to contain smoking materials, odds and ends, not forgetting a needle and thread, frequently most useful; and such an amount of ready change as the tourist requires for incidentals during the day, the bulk of his finances being securely fastened in the pocket of his coat and wrapped with it in the bundle. This bag is safely fastened at the end of one of the handles of the machine, preferably the left, as most riders dismount and stand on that side; it is handily gotten at and it is most useful in many ways. To the other handle many fasten a handkerchief, but if a loop of twine be fixed to the sponge, just large enough to easily pass over the handle, and the sponge be kept clean and moist by frequent washings at the springs and wells en route, this will be found most refreshing and more satisfactory on a hot day, besides being a great economy in handkerchiefs.

There is considerable knack, if not skill, in doing up the parcels nicely, which can only be acquired by experience or by being taught by the experienced. An old hand will put a great deal into a very small compass, but the novice will generally make a great deal, in the way of a package, out of a very little, and the reason usually is that the articles are not *folded* properly before rolling.

All the luggage may be conveniently carried on the handle-bar, and it is recommended that the luggage be divided in two parcels for convenience en route.

For those who, when touring, will insist upon carrying an immense amount of luggage, there is no excuse, as luggage can be sent to the various points through the usual channels if one will insist in having an elaborate wardrobe. A rider is not supposed, even by the most punctilious host, to carry a wardrobe of this description, and if a host really does expect this the guest had better go himself by train, or forward his portmanteau on before him. On the other hand, it is not necessary for

the cycling tourist to be always in *dishabille*; a very small amount of care and forethought will enable him to appear carefully and appropriately dressed, if nothing more.

Examine Machine Before Starting.—The tourist, before he gets away from home, will do well to look over his machine, which should be done a sufficient time before the day of departure to allow for the repair of any break or damage which may be discovered. Every part should be carefully and thoroughly overhauled, the head adjusted, each nut and spoke critically examined, the brake particularly being looked to, and strict search made for any flaw or crack or unexpected wear, as the slightest weakness in this important point may endanger the life or limb of the rider. The bearings should be carefully adjusted if any looseness is apparent, but they should never be screwed up so that there is no side shake at all, as the balls are thus liable to be broken. If the bearings are dirty or gritty they should be dosed with kerosene, which should be put in with an ordinary oil can and the wheels rotated rapidly, when the coagulated oil will be liquefied and the grit be brought out with it. After the exudations from the bearings have been wiped off, they should be carefully oiled up anew with good oil and all the kerosene worked out. The tool bag should be looked over, and contain an adjustable wrench, an oil can carefully filled with good oil, a piece of adhesive tire tape, a yard or two of stout string, and some cloth in which to wrap tools to prevent their rattling. Last, but not least, the tires should be examined all around, and should any portion, no matter how small, be loose, it should be at once attended to and made sound to undergo with safety the work before it. That you will take with you a compact and convenient repair kit is, of course, understood.

PRACTICAL POINTS.

The Fit of a Wheel.—One of the principal things in the choice of a bicycle is a proper fit. There is at present a disposition upon the part of cyclers generally to ride a machine with the highest frame that they can possibly reach. This is as much of an error as riding a machine with a very low frame or a cramped reach. While men generally are prone to go to one extreme women up to the present appear to have gone to the other, and in a majority of cases have been riding wheels with too short a reach.

How awkward a woman appears when riding a wheel that is too low for her. Her knees pump up and down in front of her and make her look as if she were trying to walk up the side of a wall. Besides that, it is harder to propel a wheel that is so low as not to give proper action to the legs, and wears the rider out much sooner.

A good test for the height is this: Have the wheel high enough so that when the rider sits in the saddle he can just reach with his heel the pedal when in the lowest position it can reach in making a revolution. That distance, with the toe instead of the heel on the pedal, gives the proper reach and swing to the leg and enables the muscles to be used to best advantage.

The average man can stretch with comfort and safety the 23 and 24-inch frame, and very few riders should go higher than the 25-inch, the adjusting of the saddle will give any extra stretch beyond what the 25-inch frame gives that may be necessary.—*American Cycling*.

How to Clean a Chain.—Procure a can about an inch wider than the diameter of the chain when coiled up. Get a piece of

galvanized wire cloth, with three-eighths to one-half inch mesh, and have it cut into circular form about one inch wider than the diameter of the can. Make a number of cuts half an inch deep around the edge and bend the wire down, making a continuous shoulder, and set it in the can, thus making a raised false bottom. Coil up the chain on it and pour in benzine till it is covered to the depth of half an inch. In a couple of minutes, agitate the chain by pushing it from side to side of the can. Then let it stand quietly for several minutes till the loosened grit and grease have been led to the bottom, when you can lift your chain perfectly clean out of the clear benzine above the wire. Pinch the edge of the can to form a spout, so you may, if economically minded, pour off the clear benzine to be used again.—*Selected.*

Inflating the Tire.—Generally speaking, a small tire requires more pressure than a large one, if it is to carry the same weight; and a given tire requires more pressure in proportion as the rider is heavy.

A tire should always contain enough air to keep its rim from the ground. If, in riding, you feel the slightest jar as your wheel runs over ordinary obstacles, it is because there is not sufficient air pressure.

There is no danger of bursting a tire, as many riders seem to fear, when the small hand pump is used, and even with the best foot pump, only the very weakest tires could be burst, while any good road tire will hold more than double the pressure which you could get into it with a foot pump.

Don't let the air out of a tire when not in use, "to save it." It is much better off, when standing, to be well inflated.

In considering the comfort of both the rider and the care of the tire, it is important that enough pressure be maintained to prevent the outer and inner parts of the air tube from coming in contact. As this depends upon the diameter of tire and weight of rider, each one must settle it for himself; no rule embodying pounds per square inch would be of general use.

An extensive observation has found a great many tires which were very much too soft, while we have rarely seen one that was too hard.

When the rider is sitting still upon the saddle and the wheels are resting on a smooth surface, the floor should be touched by the tire for a distance of about four inches; this will bring the edge of the rim within seven-eighths of an inch of the ground, allowing for the thickness of tire. This will leave nearly three-fourths of an inch for the extra compression caused by striking stones or other narrow obstacles.—*L. A. W. Bulletin.*

Care of Nickel Plating.—The bright nickel surface on the handle bars, cranks, hubs, etc., of your bicycle, is put on by an electric process, and being evenly "deposited," can only be smooth when the surface of the foundation metal has been made smooth to receive it. All polishing materials and processes involve the use of a very fine gritty or cutting substance which, when rubbed in contact with a metal surface, brightens it by an infinite number of fine scratches, so fine indeed as to be invisible to the naked eye. Even the lustrous surface of the most beautiful watch case is polished in this way. Now the nickeled parts of a bicycle, when subjected to the polishing process, are likely to be rubbed somewhat unevenly; that is, the most accessible and most exposed parts oftentimes receive rather more than a due share of the polisher's attention, and if by the slightest mischance a minute scratch penetrates through the nickel so as to touch the steel beneath, rust is

likely to form as soon as the nickel surface is exposed to dampness. You may have noticed at times that when your handle bar has been rained on and not wiped, in a few hours small spots of rust appear, although the surface of the nickel seems intact and the rust was easily wiped off. The formation of this rust may be prevented by rubbing vaseline thoroughly over all the plated work and immediately wiping off the surplus. By this process the vaseline is made to fill up all the little imperceptible scratches and prevent water and dampness from doing harm. If this precaution is attended to it will not be necessary to use scouring or brightening compounds, which are only required in cases where the nickel has been exposed to the air for a considerable time without the thin film of protecting vaseline. If you do not intend to use your wheel for some time, even in summer, put on "vaseline," "cosmic," "carboline" or "petroleum jelly" (the same thing under different names) and your machine will need only an occasional wiping with a cloth to keep it free from rust.—*L. A. W. Bulletin.*

RIDING.

Begin Slowly.—Any unaccustomed motion will soon tire the muscles. With care and patience you will be surprised to see how fast your power will grow. Hills which at first seem insurmountable will soon be climbed easily.

In learning, select a stretch of level road, and confine your riding to it until you feel perfect confidence in your management of the machine. Get well used to the steering and brake before trying a hill.

Hills.—Let your first hill be a gentle incline, and practice climbing and coasting it until you can do so with perfect ease. But do not coast in any case until you have acquired full control of the bicycle.

It is important that all riders who dispense with the brake should learn to use the sole of the shoe on front wheel tire in place of it, as that is one way to avoid a bad accident. It is perfectly easy and effective to brake in this way; also learn to control the wheel by back-pedaling, both on hills and for quick stops.

Pedaling.—A steady uniform pressure should be the rule. It is a great though common mistake, to strike the pedal a sudden blow as soon as it passes the top of the stroke. It should receive strong, steady pressure from top to bottom of the stroke. Practice ankle motion. Do not work with the ankles stiff. The feet should follow the pedals throughout the stroke. This will add much to the power.

The saddle should be adjusted so that you can comfortably touch the pedal at its farthest point with your *heel*.

Always stop short of fatigue. There is no easier way for a new rider to get discouraged than by riding to excess. Keep within your strength. Remember it is as far back as it is out.

Sit Up Straight.—It is easy to bend over when racing, with handles adjusted to allow an upright position.

Remember the greatest enjoyment and benefit are had by moderate speed. You are not obliged to go fast simply because you can.—*Overman Wheel Co. Handbook.*

OILING AND ADJUSTING.

Oiling.—All bearings should be properly oiled, little and often is the best rule. Machine bearings are sometimes ground to death for want of proper oiling. Spring oilers are

48 AND 50 WALKER STREET, NEW YORK

frequently provided at the ends of both axles, and, also, of the pedals. In using, press back the ball which closes the oil hole with the nozzle of the oil can, and inject a small quantity only, of the oil.

Points to Oil:—1. Front and rear wheels, at each end of axle. 2. Crank axle bearings. 3. Pedals, through one of the arms at each end of pedal. 4. Steering head bearings. 5. Brake lever joints. 6. Brake spoon joints. 7. Chain.
Use no Oil. Use a good Chain Lubricant. For best results, clean and lubricate the chain as often as once in every 100 miles. Chain should be hot before it is put into the melted lubricant.

To clean pedal bearings, the pedal may be taken off its axle bodily, and the balls will not drop out.—*Id.*

Adjusting.—All nuts should be kept tight. When you hear a rattle you may be sure something is loose that should be tight. Follow it up till you find it. Bicycles, if properly built, have means of adjustment at every joint, and there is no excuse for rattle.

If you are a novice, do not tinker your machine. Take it to some one who knows how to adjust it. Use wrench carefully. See that the jaws are closed to fit the bolt head, or nut, and use the wrench so as to bring the strain upon it edgewise.

Carry your Tool Bag with you.—Don't think you'll never need tools because you seldom need them.

Bearings.—Let the wheel be ever so fine, if the bearings are imperfect no good results will follow. Again, wheel and bearings may be perfect, but, if out of adjustment, their perfection is of no avail. A bearing, if properly adjusted, will be both tight and loose; tight enough to prevent any side play of the wheel, and loose enough to run with perfect freedom.—*Id.*

Remarks.—Wood rims are not meant to crush stones with, nor to ride curbstones. Bicycles, like everything else, need to be used reasonably.

You cannot expect good service without proper attention. Do not lend your machine. A novice may injure a machine more in an hour than an expert would in a month.

Blame yourself part of the time. The machine usually means well if you will give it a chance.

How to true a wheel—don't.

How to repair a bicycle—send to the makers and get a duplicate part and, if it does not fit without being touched with a file, send it back for one that will fit.

Should your pump become dry and work hard, soften piston with oil or vaseline. Also keep the piston rod lubricated. Watch your brake spoon. It will cut the tire if worn down to a sharp edge.

When bolts or nuts turn hard, a little oil applied to threads will help. This is also true of all shoulders and bearing parts of screws.

If you expect to ride hands off leave your steering head adjusted free. It is difficult to steer with a tight head. In fact, no bearing on the machine should be adjusted tight, as a good ball bearing will run under such close adjustment and cause undue wear though the extreme pressure may not be apparent.

Storage of Cycles.—Do not store in barn or stable. Choose a dry place. Pneumatic tires should be deflated and machines suspended so it shall not rest on the rims.—*Id.*

ROAD RULES.

1. In meeting riders, pedestrians, and vehicles, keep to the right. In overtaking and passing them, keep to the left.
2. In turning corners to the left, always keep to the outside of the street.
3. In turning corners to the right, keep as far out as possible without trespassing on the left side of the road.
4. Never expect pedestrians to get out of your way; find a way around them.
5. Never ride rapidly by an electric car standing to unload passengers.
6. Never coast down a hill having cross streets along the way.
7. Never ring your bell except to give notice of your approach.
8. In meeting other riders ascending a hill, where there is but one path, always yield the right of way to the up-riders.
9. Bear in mind that a rider meeting an electric car carrying a strong headlight is unable to see beyond the light; keep out of his way.
10. When riding straight ahead, never vary your course suddenly to right or left, without first assuring yourself that no other rider is close in your rear on the side toward which you turn.
11. Always ring your bell in overtaking riders and pedestrians to give warning of your approach. This does not mean that they are to get out of your way.
12. Do not ride too close to a novice, and in meeting a novice give plenty of room.
13. When riding after dark always carry a lantern.

(O. W. Co. *Hand Book*.)

ODDS AND ENDS.

Toe Clips.—Take a friend's advice and use them. They make pedaling easier, and the foot pressure more uniform and more constant; they keep the foot in place, prevent the slipping of pedals at critical times and in difficult places, and save the rider many bad falls and some serious accidents. Riding with toe clips is vastly easier than without, and no rider who ever used toe clips continuously for a week was afterwards satisfied to ride without them.

Brakes.—A wheel and rider having a total weight of one hundred and twenty pounds or upwards, moving at the rate of twelve miles per hour, have acquired a momentum which "back pedaling" will not promptly overcome. Brakes are neither heavy, bulky nor inconvenient. Scorchers who stick to the race-tracks may be excused for riding without brakes, but to other people they are likely to be mightily and suddenly convenient. Like the Texan's revolver the brake is apt to be wanted under conditions where a motion to adjourn would be out of order.

L. A. W. Membership.—The league wants members in large numbers, but it does not want everybody. Help us to increase our membership from good people; people of character who would feel a pride in the good work of the organization and who are willing to aid this work by their voices and influence. One good citizen who respects himself and obeys the law is a better league member than forty hoodlums who are forever shouting "What do I get for my dollar?"

The New York Tribune

A PAPER WHICH NEVER MISLEADS

In American Journalism, THE NEW YORK TRIBUNE ranks among its contemporaries with *The London Times* in England. It is a great, dignified, decent and thoroughly patriotic newspaper, loyal to its country, honest, never stooping to fakes, and admired even by rivals for the variety, accuracy and excellence of its news.

The man who grows up reading THE TRIBUNE will never have anything to unlearn and will be sound, progressive and respected by friends. There are newspapers so absolutely wrong and even malicious in their news, that if a man should read them for a month, he will never get some things straight in his mind if he lives to be a hundred years old, and the longer he reads them the worse off he is.

THE TRIBUNE IS, BEFORE ALL OTHERS, THE TRUE NEWSPAPER FOR A DECENT MAN AND A DECENT FAMILY.

AMPLE REPORTS ARE PRINTED OF ALL NEWS OF INTEREST TO LOVERS OF THE WHEEL.

FOR SALE BY ALL DEALERS.

LAWS OF NEW YORK.

1. For the Protection of Cycle Paths. Section 652 of the Penal Code (as Amended by Chapter 267, Laws of 1897), provides as follows: "*Subdivision 1.—A person who willfully and without authority or necessity drives any team or vehicle, except a bicycle upon a side path, or wheelway, constructed by or exclusively for the use of bicyclists, and not constructed in a street of a city, is punishable by a fine of not more than fifty dollars, or imprisonment not exceeding thirty days or both.*"

2. For the Punishment of Tack and Glass Throwers. Section 661 of the Penal Code provides as follows: "*Section 661: A person who willfully throws, drops or places, or causes to be thrown, dropped or placed upon any road, highway, street or public place, any glass, nails, pieces of metal, or other substance which might wound, disable or injure any animal, is guilty of a misdemeanor.*"

NOTE.—The penalty for an infraction of this law is a fine of Five Hundred Dollars, or one year's imprisonment in the Penitentiary, or both fine and imprisonment; and there is a special reason why every wheelmen in the State should co-operate in its enforcement. The original purpose of the law was to protect animals from wanton or needless injury, and more particularly horses which traverse the public roads and streets by the hundreds of thousands, and are exposed not only to needless suffering but also to a frightful death from lockjaw by the practices which this law is intended to suppress. It is evident that the throwing upon public places of any substances which might wound or disable an animal, may result in injury to the pneumatic tires now in universal use as a necessary part of the bicycle. Under the *general* law, there is no adequate or certain remedy for injury to the owner of a wheel which may be injured in that way, since it is always necessary for the injured party to prove that the injurious article or substance was placed upon the road or streets with *malicious intent* to injure property, while the court may go so far as to require proof of an intent to injure the particular wheel which has been damaged. The result of this difficulty is that many wheelmen submit in silence to a malicious wrong which interferes with their pleasure and injures their property, rather than undertake the trouble and expense of a doubtful prosecution.

If, however, all wheelmen in the State of New York, would simply assist in carrying out the *original intention of section 661* of the Penal Code, they would not only serve the cause of humanity but secure protection for themselves against a needless and irritating annoyance. In prosecuting offenders against this section, it is not necessary to prove a malicious *intent*, but simply the *fact* that a person has, knowingly, and therefore, "willfully, thrown, dropped or placed, or caused to be thrown dropped or placed upon any road, highway, street, or public place, any glass, nails, pieces of metal, or other substance which *might* wound, disable or injure any animal."

TRUCKS ON WESTERN BOULEVARD. Except when going or coming directly from or to their place of departure or destination on said Boulevard, and except when actually passing another vehicle or an obstacle, all trucks, express wagons, vans and business vehicles of all sorts shall keep in single line upon their extreme right of the Western Boulevard at all points between 59th Street and Manhattan Street. (R. O. 1896, Sec. 380).

SPEED AT STREET CORNERS. Nor shall it be lawful for any cart, wagon, coach, public cart or any other vehicle to be driven around the corner of any of the streets of said city with the horse or horses thereto traveling at a faster gait than three miles per hour. (R. O. 1896, Sec. 371).

DRIVERS MUST GIVE NAME AND ADDRESS. It shall be the duty of every person driving or having charge of a public cart to give to any person requesting it, his name and place of residence, the number of the cart he is driving or in charge of and the name and place of residence of the owner thereof; and the refusal to do so shall be deemed a violation of this Article. (R. O. 1896, Sec. 400).

LIGHTS. Any person using a bicycle, tricycle, velocipede or other such vehicle of propulsion on the public streets of this city shall be required to carry on such vehicle after sundown and before sunrise a light of sufficient illuminating power to be visible at a distance of 200 feet; also an alarm bell; and a signal shall be given by sounding said bell or otherwise on approaching and crossing the intersection of any street or avenue; and no person using a bicycle, tricycle, velocipede or other such vehicle of propulsion on the public streets of the city shall propel said bicycle, tricycle, velocipede or other such vehicle of propulsion at a rate of speed greater than eight miles an hour, nor shall any greater number than two persons abreast parade the streets of the city at any time on said bicycles, tricycles, velocipedes or other vehicles of propulsion. Any violation of this ordinance shall be punished as a misdemeanor. (R. O. 1896, Sec. 379).

It shall not be lawful for any cart, wagon, coach, public cart or any other vehicle to be driven through any of the streets of the City of New York at a greater speed than five miles an hour; nor shall it be lawful for any such vehicle to be driven around the corner of any of the streets of said city with the horse or horses thereto traveling at a faster gait than three miles per hour. (R. O. 1896, Sec. 371.)

Dogs. If any dog shall attack any person peaceably traveling on any highway, or his horse or team, and complaint thereof be made to a justice of the peace, such justice shall inquire into the complaint, and if satisfied of its truth, and that such dog is dangerous, he shall order the owner or possessor of such dog to kill him immediately. The owner or possessor of any dog, who shall refuse or neglect to kill him within forty-eight hours after having received such order, shall forfeit the sum of \$2.50 and the further sum of \$1.25 for every forty-eight hours thereafter, until such dog is killed. (County Law, page 765, Sec. 125).

Hereafter it shall not be lawful to permit any dog to go abroad loose or at large in any of the public streets, lanes, alleys, highways, parks or places within the corporate limits of the City of New York under a penalty of \$3 for each offense to be recovered against the owner, possessor or person who knowingly harbored such dog, within three days previous to the

TRUSTEE FOR CONTRACTHOLDER:

KNICKERBOCKER TRUST COMPANY OF NEW YORK.

The Union offers facilities for savings and for a reserve which especially interest members of the **Royal Arcanum** and other **Fraternal Orders**.

It secures best results from investments in Building and Loan Associations in the State of New York, where values are most reliable, and the laws governing building associations most rigid.

The interest, instead of accumulating, is employed in the payment of contractholders' dues and assessments in the Fraternal Order, sparing him annoyance and promoting his individual convenience and profit.

It pays your dues and assessments in advance of their call.

It places the contractholder in a few years where his Savings will earn the interest enough to thereafter take care of Fraternal Benefit Society member of the remainder of his life.

It is a mistake to suppose that real estate investments are not profitable as well as safe.

Small sums grow to large if they are placed right.

The art of saving consists in committing one's self to a start that forces one to go on in spite of feasts or fire-works.

Add to this a method of saving that relieves the saver from any care or anxiety as to the investment of his savings and the art of saving is nearly perfect; but it reaches the fine art of perfection when the saver gets a chance to get back a great deal more than he puts in, even with compound interest added at ten per cent.

We'll tell you in a practical way how this saving *small* sums and investing in *right* ways applies to you; or, in other words, what *small* and *right* mean, if you will mail a postal giving name of your Council and rate of your assessment.

PUNISHMENT OF TACK THROWERS. 'That any person who shall throw, drop or place or who shall cause or procure to be thrown, dropped or placed in or upon any road, highway, street, avenue or public place within the City of Brooklyn, any glass, tacks, nails, pieces of metal or other substance which is likely to injure or damage a bicycle, tricycle, or any other vehicle commonly called a 'cycle or wheel,' shall forfeit and pay a penalty of not more than \$25 and not less than \$5. (Adopted Oct. 21, 1895).'

Saddles.—Everybody is trying to make a saddle to fit everybody else. Give your saddle a chance. Did you ever note the fact that most old saddles are comfortable and most new saddles are not? A new saddle is like a new boot or shoe and sometimes like a new hat. It fits better and seats its rider more comfortably after a few weeks of use. If you have a new saddle that seems to be wrong try to improve it by adjusting it until it "rides" more easily. The best saddle in the world can be made into a clumsy, hateful seat by giving it the tilt on the saddle post, and a very poor saddle can be made fairly comfortable by giving it the right adjustment. Don't throw away your saddle or exchange it for another until you are very sure it is the fault of the saddle.

AUXILIARY HANDLE-BAR GRIPS.

Made for all size bars from
 $\frac{3}{4}$ to 1 inch.

When ordering give size of handle.

Supplies a great need.

Permits riders to change position.

Physicians Endorse It....

Physicians have been for years interested in cycling, and they pronounce it beneficial. There has only been one drawback and that has been the saddle. There has been but one perfect saddle on the market which they could recommend, that is the **Christy Anatomical Saddle**. See how it is constructed. The base is made of metal that cannot warp or change its shape. It has cushions where cushions are required to receive the pelvis bones and a space so that there

be no possibility of pressure on the sensitive parts and prevents saddle injury. When ordering your wheel insist that you get the **Christy Saddle**. Once a Christy rider; Always a Christy advocate. Booklet: "Bicycle Saddles from a Physicians Standpoint," free.

REAR VIEW, SHOWING COIL SPRINGS.

HIGH GRADE MAKERS are offering as a regular equipment, without additional cost to their buyers, **Christy Anatomical Saddles** and agents will not lose a sale on account of preference. They cost less than inferior leather saddles, and are worth more.

... NEW YORK ...

THE ORIENT

Here's Another F

that our competitors can't do—down—the **FRICTION-SAVING** qualities of the **PITCH LINE** gearing is a mechanical truth of which we can furnish mathe-

mathematical proof—and **FIGURES DON'T LIE**. It saves **45 per cent.** chain friction, and riders are finding it out. If you ride for pleasure—if you race—if you like coasting—then this **45 per cent.** will mean a big advantage to you. **TRY IT.**

Bicycle Saddle Exchange

26 West Broadway, New York

THE PRICE OF THIS BOOK.

THE first edition of these Road Books has been prepared at great expense and at the end of much labor, and published for the special use of the members of the New York State Division of the League of American Wheelmen. Every amateur cyclist (of either sex) of the age of eighteen years or upwards, is eligible to membership (initiation fee \$1.00, yearly dues \$1.00, payable in advance). Each member of our Division resident within the district covered by this book is entitled to receive one copy free until further notice. Members residing in other parts of the State will be entitled to receive one copy each, on payment of the sum of fifty cents to the Secretary-Treasurer. Other purchasers will be charged as stated below :

To persons not Members of the L. A. W., per copy,	\$2.00
To Members of the New York Division who have already received a Free Copy, per copy,	2.00
To Members of other State Divisions of the L. A. W., one copy,	1.00
To Members of other State Divisions of the L. A. W., each subsequent copy,	2.00
Every Cyclist should join the L. A. W. and Retain his (or her) membership.	

Loaning League Membership Tickets. A person who gains an advantage by the use of a membership ticket of an organization of which he is not a member, commits fraud, and a member who aids in this fraud by loaning his membership ticket, is unworthy of his position. Such an act is sufficient ground for expulsion, and should be reported by every member whose notice it may be brought.

Road Improvement. Send a two-cent stamp to Secretary-Treasurer Bull, if you are interested in the work of improved roads, and get a copy of "Country Roads" and "Macadam Roads," two illustrated practical hand-books on the improvement of country roads. See that your Senator and Member of Assembly are Good Roads' men, and watch their votes on the Good Roads measures in the Legislature at Albany.

Accidents to Wheelmen. If you sustain an injury to your person or property through the reckless driving of another, or by reason of a serious defect of the street pavement, road surfaces or bridge, write full particulars to the Chairman of our Committee on Rights and Privileges, George E. Miner, Attorney, Potter Building, New York.

Stolen Wheels. Always keep a written memorandum of the number of your wheel, its make, size, pattern, color and other facts making up a complete and careful description. If your wheel is stolen, send your name and League number, with full description of wheel and particulars of theft to W. S. BULL, Secretary-Treasurer, Vanderbilt Building, New York. Our Division offers a reward of \$25.00 for the apprehension of bicycle thieves. One of these thieves was recently sent to Sing Sing for a term of nine years by Judge Aspinwall of the Kings County Court. This thief is lonesome and wants company.

Hotels. Read carefully the important note at the head of the list of consuls, hotels and repair shops on another page. Help us to enforce our contract and to prevent fraudulent "L. A. W. Hotels." The Chief Consul will be glad to have your co-operation in these matters at all times.

New Members. Have you seen the beautiful Honor Badge of 1897 shown on the first page of this book? It will be easy for you to get new members now, since the Road Book is in your possession. Tell your cycling friends that a copy of the Road Book will be sent promptly to each new member. Write a postal card to Secretary-Treasurer BULL and get a little pocket-book of membership blanks, and carry it with you at all times. When you get an application for membership send it direct to Mr. BULL, and he will give you credit for all you send. In due time you will receive an Honor Certificate and Honor Badge, and they will be valuable souvenirs in years to come.

Road Maps and Tour Books. The free distribution of the old edition of the Road Maps and Tour Books discontinued among the members of the New York and Brooklyn district. Members residing within this district and desiring copies of the Tour Book or Road Maps will be supplied on receipt of fifty cents by the Secretary-Treasurer, with a written request stating whether a set of Maps or the Tour Book is required.

The New York Journal

A MAGNIFICENT SUCCESS!

Positively Unique in All Departments.
